B - Project Proposal

Performed by: Nguyễn Lê Đức Nhật & Ngô Thái Hòa (AI Feature) | Reviewed by: Phạm Định Tiểu Long | Edited by: Nguyễn Lê Đức Nhật

B.1. Introduction

Performed by: Nguyễn Lê Đức Nhật | Reviewed by: Phạm Định Tiểu Long | Edited by: Nguyễn Lê Đức Nhật

FinSync is a comprehensive financial management application that combines personal asset management (similar to Money Lover) with intelligent group expense splitting (similar to Splitwise). The app is designed for individuals, students, and groups of users who need to track shared expenses such as room rent, travel trips, and events.

Current personal finance apps lack group expense management capabilities, while group splitting apps do not offer personal budgeting and account features. FinSync solves this problem by unifying personal and group finance into a single ecosystem, enhanced by an AI-powered financial advisor that analyzes spending history and recommends optimal spending plans for the upcoming month.

The system acts purely as a bookkeeping and reminder tool — it does **not** automatically deduct money or interact with real bank accounts.

B.2. Target Users and Environments

Performed by: Nguyễn Lê Đức Nhật | Reviewed by: Phạm Định Tiểu Long | Edited by: Nguyễn Lê Đức Nhật

Target Users

1. Regular User:

Individual users (students, young professionals) who need to track their personal cash flow, set savings goals, and simultaneously create or join group spending pools to share bills with friends or colleagues. Within a group, a user can hold one of two roles:

- **Owner:** The person who creates and manages the group.
- **Member:** A participant who joins an existing group.

2. Administrator:

A system administrator who accesses a simple web-based admin panel to perform basic administrative tasks: viewing user lists, locking/unlocking accounts, managing default income/expense categories, and viewing aggregate statistics (total users, total transactions).

Environments

Component	Technology	Platform
Mobile App (Regular User)	Flutter (Dart)	Android
Admin Web Panel (Administrator)	React.js	Web Browser
Backend API Server	Spring Boot (Java)	Cloud Server
Database	PostgreSQL	Cloud Server

The mobile application targets Android devices and is built with Flutter. The admin panel is a simple web application built with React.js. Both connect to a shared Spring Boot backend via RESTful APIs.

B.3. Key Features

Performed by: Nguyễn Lê Đức Nhật | Reviewed by: Phạm Định Tiểu Long | Edited by: Nguyễn Lê Đức Nhật

Feature 1: Authentication and Security

The authentication module handles user registration, login, logout, and password recovery using encrypted JWT tokens. It ensures that all personal and group financial data remains private and secure, with only authorized accounts able to access their respective information.

Feature 2: Profile Management

This feature allows users to view and edit their personal information, change their password, update their profile picture, and configure general settings such as the default currency (VND, USD). It provides a personalized experience and ensures user preferences are consistently applied throughout the app.

Feature 3: Wallet and Personal Account Management

Users can create and manage bookkeeping wallets (cash, bank account, credit card) to track their balances. These wallets are purely manual-entry — they do not link to or affect real bank accounts. The system aggregates all wallet balances into a single dashboard providing an overview of the user's net worth.

Feature 4: Personal Transaction Tracking

Users can quickly record personal income and expense entries by specifying the amount, category, notes, date, and an optional receipt image. This maintains an accurate personal ledger over time and allows users to review their spending patterns at a glance.

Feature 5: Group Management and Shared Wallets

Users can create groups (for shared housing, travel, projects, etc.), invite members via a link or code, and assign roles (Owner and Member). Each group has its own shared wallet or ledger that is completely separated from personal finances, ensuring clarity between individual and collective spending.

Feature 6: Smart Debt Split and Settlement

This feature automatically splits group expenses using flexible methods: equal split, percentage-based split, or exact-amount split. The system displays a consolidated summary of who owes whom and how much, sends payment reminder notifications to members with outstanding debts, and allows users to mark debts as "settled" once payment is confirmed outside the app.

Feature 7: Budget Planning and Alerting

Users can set spending limits for individual personal categories or group funds on a weekly or monthly basis. The system triggers visual alerts when spending approaches or exceeds defined thresholds (at 80% and 100%), helping users stay within their financial boundaries.

Feature 8: Financial Reporting and Analytics

This feature visualizes cash flow structure through interactive charts (pie charts, bar charts). For groups, the system generates expense summary reports after trips or on a monthly basis. Reports can be exported as PDF or Excel files for record-keeping and sharing.

Feature 9: Savings Goal Management

Users can set long-term financial goals (e.g., buying a laptop, funding a trip), track their progress toward each goal, and manually or automatically allocate surplus funds. This encourages disciplined saving behavior and gives users a clear roadmap to their financial targets.

Feature 10: System Administration (Admin Panel)

The administrator can manage users (view list, lock/unlock accounts), manage default system income/expense categories, and view aggregate platform statistics. This ensures the platform remains well-maintained and provides oversight for user management.

B.4. AI Feature

Performed by: Ngô Thái Hòa | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Ngô Thái Hòa

AI Financial Advisor

Description:

The AI Financial Advisor is an intelligent spending consultant integrated into the app. At the beginning of each month (or on-demand), the AI automatically scans the user's entire transaction history from the previous month — including personal income, personal expenses, and group spending — to analyze cash flow structure, detect abnormal or spiking expense categories, and propose a practical spending plan for the current month.

How it works:

1. **Comparison Analysis:** The AI compares actual spending in each category against the user's set budget and the average of previous months.
2. **Anomaly Detection:** It flags categories with spending trends that exceed the budget or spike abnormally (e.g.,
"Your dining expenses last month increased by 40% compared to the 3-month average. Consider limiting it to 2.5 million VND this month."
).
3. **Optimized Budget Allocation:** It suggests an optimal budget allocation for each category based on the user's income, savings goals, and actual spending habits.
4. **Savings Progress Evaluation:** It evaluates progress toward savings goals and provides adjustment recommendations if the user is falling behind.

Technology: The backend calls an AI model API (Google Gemini API / OpenAI API) to analyze spending data and generate financial recommendations.

User Value:

This feature transforms raw spending data into proactive financial guidance. Users not only know what they have spent but also receive actionable advice on how they should spend in the coming month, fostering healthy financial habits and helping achieve long-term savings goals.

C - Existing App Survey

Performed by: Ngô Thái Hòa (Money Lover) & Vương Đức Gia Khiêm (Splitwise) | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Ngô Thái Hòa & Vương Đức Gia Khiêm

C.1. App 1: Money Lover

Performed by: Ngô Thái Hòa | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Ngô Thái Hòa

App Name: Money Lover

Platform: Android, iOS, Web

Website: <https://moneylover.me>

Overview

Money Lover is one of the most popular personal finance management apps in Vietnam and Southeast Asia. It allows users to track daily income and expenses, manage multiple wallets, set budgets, and view financial reports through charts.

Screenshots and Analysis

Screen 1: Dashboard / Home Screen

Caption: The home screen shows the user's wallet balance, recent transactions, and a summary of income/expenses for the current period. The clean layout provides quick access to add new transactions.

Screen 2: Transaction Entry

Caption: The transaction entry screen allows users to select a category, enter an amount, add notes, choose a wallet, and set a date. Categories are displayed as icons for quick selection.

Screen 3: Budget Management

Caption: The budget screen shows spending progress bars for each category. Users can set monthly limits and receive warnings when approaching the threshold.

Screen 4: Reports and Charts

Caption: The report section offers pie charts and bar charts showing expense distribution by category and income vs. expense trends over time.

Screen 5: Wallet Management

Caption: Users can create and manage multiple wallets (cash, bank, credit card) with individual balances that aggregate into a total net worth view.

Key Strengths

- Intuitive and clean user interface
- Rich category system with custom categories
- Multi-wallet support with balance tracking
- Detailed financial reports with interactive charts
- Budget setting and tracking with alerts

Key Limitations

- No group expense management or bill splitting features
- No AI-powered spending analysis or recommendations
- Limited to personal finance only

C.2. App 2: Splitwise

Performed by: Vương Đức Gia Khiêm | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Vương Đức Gia Khiêm

App Name: Splitwise
Platform: Android, iOS, Web
Website: <https://www.splitwise.com>

Overview

Splitwise is the leading group expense management app worldwide. It simplifies splitting bills among friends, roommates, and travel companions by tracking who owes whom and minimizing the number of transactions needed to settle all debts.

Screenshots and Analysis

Screen 1: Group List / Dashboard

Caption: The main screen displays all groups the user belongs to, showing the total balance (amount owed or owed to the user) for each group. Color coding (green for positive, red for negative) provides quick visual feedback.

Screen 2: Group Detail and Expenses

Caption: Inside a group, all shared expenses are listed chronologically with the payer and amount. Each expense shows how it was split among members.

Screen 3: Add Expense

Caption: When adding a group expense, the user specifies who paid, the total amount, and how to split it (equally, by exact amounts, or by percentages). The UI makes it easy to include or exclude specific members.

Screen 4: Balance Summary

Caption: The balance tab shows a simplified debt summary — who owes whom and how much — using a debt simplification algorithm that minimizes the number of transfers needed.

Screen 5: Settle Up

Caption: The settle-up flow allows users to record payments made outside the app (cash, bank transfer) and mark debts as resolved.

Key Strengths

- Excellent group expense splitting with multiple split methods
- Debt simplification algorithm minimizing transfer count
- Clear visual balance summaries
- Support for multiple currencies
- Settle-up flow for recording external payments

Key Limitations

- No personal finance management (no wallets, budgets, or personal transaction tracking)
- No AI-powered financial analysis or recommendations
- No savings goal features
- Premium features locked behind paywall

C.3. Comparison and Differentiation

Performed by: Ngô Thái Hòa & Vương Đức Gia Khiêm | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Ngô Thái Hòa & Vương Đức Gia Khiêm

Feature Comparison Table

Feature	Money Lover	Splitwise	FinSync (Ours)
Personal wallet management	✓	✗	✓
Personal transaction tracking	✓	✗	✓
Budget planning & alerts	✓	✗	✓
Financial reports & charts	✓	Limited	✓
Savings goals	✓	✗	✓
Group expense management	✗	✓	✓
Smart debt splitting	✗	✓	✓
Debt simplification algorithm	✗	✓	✓
Payment reminders	✗	✓	✓
AI financial advisor	✗	✗	✓
Admin panel	✗	✗	✓
Unified personal + group finance	✗	✗	✓

What Our App Will Do Differently or Better

- 1. Unified Ecosystem:** FinSync bridges the gap between personal finance management and group expense splitting — users no longer need two separate apps.
- 2. AI-Powered Financial Advisor:** Neither Money Lover nor Splitwise offers AI-driven spending analysis. Our app will proactively analyze spending patterns and suggest optimized budgets for the next month.
- 3. Seamless Personal-Group Integration:** When a group expense is recorded, the system automatically notifies all members involved and tracks debts alongside personal finances, providing a holistic financial overview.
- 4. Localized for Vietnamese Users:** Designed with Vietnamese users in mind (VND currency, local spending categories, Vietnamese UI translations), while maintaining international currency support.

UI/UX Patterns We Plan to Adopt

- From Money Lover:** Clean dashboard layout, icon-based category selection, wallet balance aggregation view, interactive report charts (pie/bar).
- From Splitwise:** Group balance color coding (green/red), simplified debt summary view, settle-up flow for external payments, flexible expense splitting UI (equal/percentage/exact).

D - Team Contract

Performed by: Phạm Định Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Định Tiểu Long

D.1. Team Roles and Responsibilities

Performed by: Phạm Định Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Định Tiểu Long

The table below defines the specific assignment of responsibilities for each member in the project:

Member	Role	Primary Responsibilities
Phạm Đình Tiểu Long	Group Leader	Task delegation to members, repository initialization (repository creation only), author Section A (Group Registration) and Section D (Team Contract).
Nguyễn Lê Đức Nhật	Technical Lead & Architecture	Project setup following repository creation, configure Spring Boot dependencies, write Dockerfile and docker-compose configurations, author Section B (Project Proposal), and review/consolidate all members' report contributions.
Ngô Thái Hòa	Product Analyst & AI Feature Lead	Author Section B.4 (AI Feature specification), author Section C.1 (Money Lover survey, screenshots, strengths, and limitations), and contribute to Section C.3 comparative feature matrix.
Vương Đắc Gia Khiêm	Product Analyst (Splitwise)	Author Section C.2 (Splitwise survey, screenshots, strengths, and limitations) and contribute to Section C.3 comparative feature matrix.
Nguyễn Phú Đạt	Tools & Process Lead	Author Section E (Development Tools & Process Setup): configure communication tools (Zalo, Google Meet), Jira Scrum project, GitHub workflow, AI tools, and Weekly Reports.

Note: All members participate actively in peer reviews, and all technical and documentation submissions are subject to review by the Technical Lead (Nguyễn Lê Đức Nhật) and Group Leader (Phạm Đình Tiểu Long).

D.2. Communication Plan

Performed by: Phạm Đình Tiểu Long | Reviewed by: Nguyễn lê Đức Nhật | Edited by: Phạm Đình Tiểu Long

Communication Tools

Tool	Purpose	Frequency
Discord / Zalo	Daily discussions, quick questions, file sharing	Daily
Google Meet / Zoom	Sprint meetings, Sprint review, Sprint planning	4 times per Sprint
Jira	Task management, progress tracking	Checked daily
GitHub	Code reviews, pull requests, documentation	As needed
Email	Formal communications, submissions	As needed

Meeting Schedule

- **Sprint Planning:** First day of each Sprint (1 meeting)
- **Scrum Meetings:** Twice during each Sprint, spread evenly (2 meetings)
- **Sprint Review:** Last day of each Sprint (1 meeting)

Communication Protocols

- All members must respond to messages within **12 hours** during weekdays.
- All members must respond to messages within **24 hours** during weekends.
- Decisions are documented in meeting notes and shared via the communication channel.
- If a member cannot attend a meeting, they must notify at least **24 hours in advance** and provide written updates.

D.3. Work Schedule and Deadlines

Performed by: [Phạm Đình Tiểu Long] | Reviewed by: [Nguyễn lê Đức Nhật] | Edited by: [Phạm Đình Tiểu Long]

Project Milestones

Milestone	Deadline	Description
PA1	Week 2	Project proposal, app survey, team contract, tool setup
PA2	Week 4-5	Requirements specification, use case diagrams, UI design
PA3	Week 7-8	Software architecture, detailed design, initial implementation
PA4	Week 10-11	Implementation, testing, final delivery

Availability and Work Sessions

- Members are available for meetings: **Sunday 7-9 PM**
- Each member commits to at least **1 hours per week** on project work.
- Tasks are assigned during Sprint Planning and tracked via Jira.

Contingency Plans

- If a member cannot meet a deadline, they must notify the team **at least 1 days before** the deadline.
- The team will redistribute the workload if a member faces unexpected difficulties.
- If a member drops the course, remaining members will redistribute tasks during the next Sprint Planning.

D.4. Code and Documentation Standards

Performed by: Phạm Định Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Định Tiểu Long

Coding Conventions

- **Kotlin (Android Client):** Follow [Kotlin Documentation](#) style guide. Use [lowerCamelCase](#) for variables/functions, and [UpperCamelCase](#) for classes and composables.
- **Java (Spring Boot):** Follow standard naming conventions for the respective backend language. Use meaningful class, package, and method names.
- **Python (FastAPI / AI Microservice):** Follow [PEP 8](#) style guide. Use [snake_case](#) for variables, functions, and filenames, and [UpperCamelCase](#) for classes.
- **General:** All code must include meaningful comments for complex logic (such as Notification Regex parsing algorithms or AI data formatting). Variable and function names must be descriptive and in English.

Code Review Process

- All code changes must be submitted via **pull requests (PRs)** on GitHub.
- Every PR must be reviewed by **at least 1 other team member** before merging.
- PR descriptions must clearly explain what was changed and why.
- The reviewer must test the code locally before approving.

Documentation Standards

- All documents are written in **English** using **Markdown format**.
- Diagrams are created using **Mermaid syntax** when possible (such as system architectures and data flows).
- Each section must include the [Performed by](#) | [Reviewed by](#) | [Edited by](#) attribution.
- Documentation is version-controlled in the [/docs](#) folder of the Git repository.

D.5. Accountability and Performance

Performed by: Phạm Định Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Định Tiểu Long

Contribution Measurement

- Work is tracked via Jira task completion and GitHub commit history.
- Each Sprint Review includes a peer assessment where members rate each other's contributions.
- The Project Manager maintains a contribution log updated weekly.

Handling Underperformance

1. **First occurrence:** Private discussion with the member and the Project Manager to identify issues and provide support.
2. **Second occurrence:** Team meeting to address the issue collectively and reassign tasks if needed.
3. **Third occurrence:** The issue is escalated to the TA or instructor for intervention.

Consequences

- Consistently underperforming members may receive a reduced individual grade as per the team's peer evaluation.
- Failure to complete assigned tasks without valid reason will be documented and reported to the instructor.

D.6. Decision-Making Process

Performed by: Phạm Đình Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Đình Tiểu Long

- **Technical decisions** (architecture, tools, libraries) are made by **majority vote** after discussion.
- **Design decisions** (UI/UX, user flows) are led by the UI/UX Designer but require team consensus.
- In case of a **tie or deadlock**, the Project Manager / Group Leader has the final say.
- All major decisions are documented in meeting notes with the reasoning recorded.

D.7. Conflict Resolution

Performed by: Phạm Đình Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Đình Tiểu Long

Resolution Framework

1. **Step 1 - Direct Discussion:** The involved parties discuss the issue privately and try to reach a resolution.
2. **Step 2 - Team Mediation:** If Step 1 fails, the issue is brought to the full team for mediation during a meeting.
3. **Step 3 - Leader Arbitration:** If the team cannot resolve it, the Project Manager makes the final decision.
4. **Step 4 - Escalation:** If the conflict persists or involves serious issues (e.g., academic dishonesty, harassment), it is escalated to the TA or course instructor.

Ground Rules

- Disagreements must be professional and focused on the issue, not personal.
- All team members must respect each other's opinions and contributions.
- No unilateral decisions that affect the entire team.

D.8. Review and Update Process

Performed by: Phạm Đình Tiểu Long | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Phạm Đình Tiểu Long

- The team contract is reviewed at the **end of each Sprint** during the Sprint Review meeting.
- Any member can propose amendments to the contract at any time.
- Amendments require a **majority vote** to be adopted.
- All changes to the contract are version-controlled in the Git repository with a clear commit message.

E - Development Tools and Process Setup

Performed by: Nguyễn Phú Đạt | Reviewed by: Nguyễn Lê Đức Nhật | Edited by: Nguyễn Phú Đạt

E.1. Development Process

- Process methodology: Scrum.
- Process:
 - 1 sprint is fixed for 2-3 weeks, corresponding with each PA.
 - There are 4 meetings for each sprint:
 - 1 sprint planning meeting: plan for the next sprint
 - This meeting needs to be held at the end of the current sprint and before the next sprint.
 - Identify and prioritize tasks, user-story or a part of a use-case for the next sprint
 - Assign tasks to team
 - 2 weekly scrum meetings
 - Each member answers 3 questions:
 - What have I done since last week?
 - What will I do until next week?
 - What issues / problems / obstacles do I have?
 - Use a single document for all scrum meetings.
 - 1 sprint review (retrospective) meeting:
 - This meeting is held at the end of each sprint to review and evaluate the results of the current sprint.
 - In this meeting, the team needs to discuss and record the following:
 - What went well.
 - What went wrong.
 - What problems and what caused the problems.
 - What can be done differently in the next sprint to improve
 - What lessons we could learn.

Weekly Scrum Meeting Minutes

===== 27/09, Sprint 1 (Sprint Planning) =====

Team members present:

- Phạm Đình Tiểu Long
- Nguyễn Lê Đức Nhật
- Ngô Thái Hòa
- Vương Đức Gia Khiêm
- Nguyễn Phú Đạt

Team members absent:

- None

Agenda & Planning:

- Deconstruct PA1 project assignment specification and define deliverables for Sprint 1.
- Establish workload distribution and assign specific roles to team members:
 - **Phạm Đình Tiểu Long (Group Leader):** Coordinate team tasks, initialize GitHub repository skeleton (repository creation only), author Section A (Group Registration) and Section D (Team Contract).

- **Nguyễn Lê Đức Nhật (Technical Lead):** Author Section B (Project Proposal: Introduction, Target Users, 10 Functional Groups), set up project structure after repository creation, configure Spring Boot dependencies, author Dockerfiles (Dockerfile, docker-compose.yml), and review all members' report sections.
- **Ngô Thái Hòa:** Author Section B.4 (AI Feature specification and Google Gemini 1.5 API workflow), and conduct comprehensive survey of Money Lover application (5 core screens, analysis, strengths, limitations) for Section C.1.
- **Vương Đắc Gia Khiêm:** Conduct comprehensive survey of Splitwise application (5 core screens, analysis, strengths, limitations) and write Section C.2.
- **Nguyễn Phú Đạt:** Set up development tools and process (Section E: communication channels, Jira Scrum project and board, GitHub workflow, AI tools, Weekly Reports).
- Formulate Sprint 1 backlog tasks and agree on milestone delivery deadlines.

Summary of the meeting:

- All members aligned on scope, technology stack, and individual task ownership. Sprint 1 officially kicked off.

===== 01/10, Sprint 1 (Weekly Scrum 1) =====

Team members present:

- Phạm Đình Tiểu Long
- Nguyễn Lê Đức Nhật
- Ngô Thái Hòa
- Vương Đắc Gia Khiêm
- Nguyễn Phú Đạt

Team members absent:

- None

Status reports:

- Phạm Đình Tiểu Long
 - Completed tasks
 - Delegated tasks and initial work packets to all team members
 - Initialized empty GitHub repository "pdtLong2929/FinSync" (skeleton structure only)
 - Authored Section A (Group Registration) and initial draft of Section D (Team Contract)
 - To-do Tasks
 - Finalize Section D (Team Contract: Roles, Responsibilities, Ground Rules, Accountability, and Decision-Making)
 - Coordinate sprint activities and track submission milestones
 - Issues/Obstacles
 - None
- Nguyễn Lê Đức Nhật
 - Completed tasks
 - Set up project structure after repository initialization
 - Configured Spring Boot backend dependencies in pom.xml
 - Authored draft of Section B (Introduction, Target Users, and core module descriptions)
 - Authored Dockerfile and docker-compose.yml for containerized PostgreSQL service
 - To-do Tasks
 - Finalize Section B (Proposal) with detailed scope for all 10 modules

- Review and consolidate draft report sections submitted by team members
 - Verify and test Docker container builds and dependency configurations
 - Issues/Obstacles
 - None
- Ngô Thái Hòa
 - Completed tasks
 - Surveyed Money Lover application (captured 5 key screens: Home, Transaction Entry, Budgeting, Reports, Wallets)
 - Drafted overview, strengths, and limitations for Money Lover (Section C.1)
 - Authored initial draft of Section B.4 (AI Financial Advisor specification)
 - To-do Tasks
 - Finalize Section B.4 (AI Financial Advisor specification and Gemini 1.5 API workflow)
 - Finalize Section C.1 (Money Lover survey, analysis, and key takeaways)
 - Contribute Money Lover feature comparison data to Section C.3
 - Issues/Obstacles
 - None
- Vương Đức Gia Khiêm
 - Completed tasks
 - Surveyed Splitwise application (captured 5 key screens: Group Dashboard, Add Expense, Balance Sheet, Settle Up, Activity Log)
 - Drafted overview, strengths, and limitations for Splitwise (Section C.2)
 - To-do Tasks
 - Finalize Section C.2 (Splitwise survey, analysis, and key takeaways)
 - Contribute Splitwise feature comparison data to Section C.3
 - Issues/Obstacles
 - None
- Nguyễn Phú Đạt
 - Completed tasks
 - Set up Zalo group "CNPM-2026 Nhóm 4" and Google Meet links for team communication (Section E.2)
 - Created initial Jira Scrum project "CNPM-2026 - Group 4"
 - To-do Tasks
 - Complete Section E report write-up (Jira setup, GitHub workflow, AI tools, and Weekly Reports)
 - Reconfigure Jira board and standardize Weekly Scrum meeting records according to course instructions
 - Issues/Obstacles
 - Jira project and board configuration did not yet meet standard requirements, and encountered difficulties properly formatting the Weekly Report structure

Actions (if any)

- Nguyễn Lê Đức Nhật to review Section E progress and provide corrective guidance on Jira configuration and Weekly Report format before Weekly Scrum 2.

Summary of the meeting

- Project setup, Section B drafting, and app surveys are advancing according to plan (~50% progress). Nguyễn Phú Đạt reported issues regarding Jira standards and Weekly Report format, which will be addressed with review guidance.

===== 04/10, Sprint 1 (Weekly Scrum 2) =====

Team members present:

- Phạm Định Tiểu Long
- Nguyễn Lê Đức Nhật
- Ngô Thái Hòa
- Vương Đức Gia Khiêm
- Nguyễn Phú Đạt

Team members absent:

- None

Status reports:

- Phạm Định Tiểu Long
 - Completed tasks
 - Finalized Section D (Team Contract: Roles, Responsibilities, Ground Rules, Accountability, and Decision-Making)
 - Coordinated sprint activities and tracked submission milestones
 - To-do Tasks
 - Organize and lead Sprint Review & Retrospective meeting
 - Issues/Obstacles
 - None
- Nguyễn Lê Đức Nhật
 - Completed tasks
 - Finalized Section B (Proposal) with detailed scope for all 10 modules
 - Reviewed and consolidated draft report sections submitted by team members
 - Verified and tested Docker container builds and dependency configurations
 - To-do Tasks
 - Perform final quality audit of the entire consolidated report.md against PA1 specification
 - Issues/Obstacles
 - None
- Ngô Thái Hòa
 - Completed tasks
 - Finalized Section B.4 (AI Financial Advisor specification and Gemini 1.5 API workflow)
 - Finalized Section C.1 (Money Lover survey, analysis, and key takeaways)
 - Contributed Money Lover feature comparison data to Section C.3
 - To-do Tasks
 - Verify image links and Markdown formatting for Section C.1
 - Issues/Obstacles
 - None
- Vương Đức Gia Khiêm
 - Completed tasks
 - Finalized Section C.2 (Splitwise survey, analysis, and key takeaways)
 - Contributed Splitwise feature comparison data to Section C.3
 - To-do Tasks
 - Verify image links and Markdown formatting for Section C.2
 - Issues/Obstacles
 - None

- Nguyễn Phú Đạt
 - Completed tasks
 - Completed Section E report write-up (Jira setup, GitHub workflow, AI tools, and Weekly Reports)
 - Reconfigured Jira board and standardized Weekly Scrum meeting records according to course instructions
 - To-do Tasks
 - Revise Jira board configuration and refine Weekly Report documentation following team feedback
 - Issues/Obstacles
 - Jira project configuration and Weekly Report documentation have still not fully met the required course standards and require dedicated restructuring

Actions (if any)

- Nguyễn Lê Đức Nhật to perform a direct hands-on review to assist in finalizing Section E and resolving Jira/Weekly Report discrepancies.

Summary of the meeting

- Sections A, B, C, and D are complete and verified. Section E and Jira setup are identified as the primary items needing corrective revision before Sprint Review.

===== 08/10, Sprint 1 (Sprint Review & Retrospective) =====

Team members present:

- Phạm Định Tiểu Long
- Nguyễn Lê Đức Nhật
- Ngô Thái Hòa
- Vương Đắc Gia Khiêm
- Nguyễn Phú Đạt

Team members absent:

- None

Sprint Retrospective:

- What went well:
 - Clear task delegation and role boundaries established early by Phạm Định Tiểu Long; Ngô Thái Hòa and Vương Đắc Gia Khiêm completed thorough surveys for Money Lover and Splitwise respectively.
 - Comprehensive Project Proposal (Section B) structured and detailed by Nguyễn Lê Đức Nhật, enriched by Ngô Thái Hòa's dedicated AI Financial Advisor specification (Section B.4).
 - Strong technical foundation established by Nguyễn Lê Đức Nhật with robust Spring Boot dependency configuration, Dockerfiles, and thorough report consolidation.
 - Good team communication via Zalo and Google Meet with prompt responses.
- What went wrong:
 - Section E deliverables assigned to Nguyễn Phú Đạt, specifically the Jira board setup and Weekly Report meeting minutes, did not meet standard course specifications on the initial submission.
 - Additional time and effort were required by Nguyễn Lê Đức Nhật to review, restructure, and correct Section E and meeting minutes.
- What problems and what caused the problems:

- Lack of familiarity with standard Jira Scrum board configuration rules and strict formatting guidelines outlined in WeeklyReport.md.
 - Insufficient early verification of Section E deliverables before mid-sprint.
 - What can be done differently in the next sprint to improve:
 - Establish an early review checkpoint (mid-sprint) for all tooling, Jira tickets, and documentation artifacts.
 - Provide standardized templates and explicit checklist guidelines for Jira task management before launching Sprint 2.
 - What lessons we could learn:
 - Clear individual ownership must be accompanied by continuous peer-review (led by the Technical Lead / Reviewer) to ensure high standards across all deliverables.
 - Complex tools like Jira and formal Weekly Reports require strict adherence to guidelines from day one.
-

E.2. Communication Tools

The team uses **Zalo** as the primary communication platform. The group is named “**CNPM-2026 Nhóm 4**” and currently contains five members.

Zalo is used for:

- Daily team communication.
- Discussing project tasks and requirements.
- Sharing files and documents.
- Sending meeting information and announcements.

For online meetings, the team uses **Google Meet**. Meeting links are shared through the Zalo group so that members can join discussions and project meetings.

Evidence

Caption: Zalo communication group "CNPM-2026 Nhóm 4" with five active members.

Caption: Google Meet virtual conference room used for team meetings and discussions.

E.3. Task Management with Jira

The team uses **Jira** to manage project tasks according to the Scrum process. A Scrum project named **“CNPM-2026 - Group 4”** has been created.

The Jira board uses the following workflow:

1. **To Do** – tasks that have not been started.
2. **In Progress** – tasks that are currently being worked on.
3. **Done** – completed tasks.

Tasks are created before the work begins and are assigned to individual team members. Each task is assigned to exactly one member so that individual responsibilities and contributions can be tracked clearly.

Examples of PA1 tasks currently managed in Jira include:

- Write Project Introduction.
- Define Target Users and Environment.
- Define Functional Groups.
- Design AI Feature.
- Research Existing Applications.
- Write Existing App Comparison.
- Write Team Contract.
- Set up Jira Project.
- Set up GitHub Repository.
- Prepare Scrum reports and Sprint Review.
- Review PA1 Documentation.
- Export Markdown documents to PDF.
- Prepare Git log evidence.
- Prepare the final PA1 submission.

The team will update task statuses throughout the sprint to reflect the actual progress of the work.

Evidence

E.4. Version Control and Repository (GitHub)

The team uses **GitHub** for version control and project documentation. The project repository is named **FinSync**.
Repository URL:

<https://github.com/pdtLong2929/FinSync>

The repository currently contains the following main structure:

```
FinSync/  
├── docs/  
├── screenshots/  
├── src/  
├── .gitignore  
├── GEMINI.md  
├── README.md  
├── WeeklyReport.md  
├── docker-compose.yml  
├── pa1_2026_project_assignment_specification.md  
└── report.md
```

The repository is used to store source code, documentation, screenshots, project reports, and configuration files.

At the time of preparing this report, the repository contains **5 commits**. The repository screenshot also shows the current commit count and recent commit activity as evidence of the team's development progress and version-control activity.

Example commit activities include:

- Initial project structure and base files.
- Documentation updates.
- Backend development using Spring Boot.
- PostgreSQL database setup.
- Docker-related configuration.

- Screenshot directory preparation.

Evidence

E.5. AI-Assisted Development Tools

The team uses several AI-assisted tools to support software development and self-learning, including:

- **ChatGPT**
- **Claude**
- **Gemini**
- **GitHub Copilot**
- **Codex**

These tools are used to support activities such as:

- Code generation and code completion.
- Debugging and error explanation.
- Learning unfamiliar technologies.
- Improving documentation.
- Reviewing implementation ideas.
- Assisting with software development tasks.

AI-generated suggestions are reviewed by team members before they are integrated into the project.

Evidence

All team members have registered and verified their educational and developer AI coding accounts to support project implementation as summarized below:

AI Coding Accounts Registration Evidence

#	Team Member	AI Coding Platform	Registration Status
1	Phạm Định Tiểu Long	GitHub Copilot (Student) / ChatGPT	✔️ Active
2	Nguyễn Lê Đức Nhật	Codex / Gemini	✔️ Active
3	Ngô Thái Hòa	GitHub Copilot (Student) / Gemini	✔️ Active
4	Vương Đắc Gia Khiêm	GitHub Copilot (Student) / Codex	✔️ Active
5	Nguyễn Phú Đạt	Cursor / GitHub Copilot	✔️ Active

E.6. Spec Kit

The team has **not initialized Spec Kit during PA1**.

According to the PA1 requirements, Spec Kit setup and initialization will become required starting from **PA2**. The team will configure Spec Kit at the beginning of PA2 and use it to support specification-driven development from requirements to implementation.

E.7. Tool Setup Summary

Area	Tool / Platform	Current Status
Team Communication	Zalo	Set up
Online Meetings	Google Meet	Set up
Task Management	Jira	Set up
Development Process	Scrum	In use
Version Control	GitHub	Set up
Git History	Git commits	Available
AI Assistance	ChatGPT, Claude, Gemini, GitHub Copilot, Codex	In use
Spec Kit	Spec Kit	Planned for PA2

The current tool setup provides the team with a structured environment for communication, task management, version control, documentation, and AI-assisted development. The team will continue updating Jira tasks, Git commits, meeting records, and supporting evidence throughout the sprint.
